

# IT Security – Cyber Security Assessment

A Cyber Security Assessment to check resiliency and suggest potential actions

[CLICK TO BOOK](#)

## Outcome

The assessment result will be included within a detailed IT cyber security report, in which the current situation and the possible vulnerabilities are described. A typical report is 30-40 pages, and a short presentation will also be completed to summarize the findings and allow Q&A's.

## What is it?

This assessment is a combination of machine run scanning, combined with workshops to understand policies and current operating procedures. The themes covered within the assessment include, Security (MFA, Sign in, Reverse Proxy, Security Broker, Identify Protection etc.), Information Protection (Data Classification, Data retention etc.), Backup (Versioning, Retention, Recovery Testing etc.) and Firewall analysis. The assessment also includes a close look at the licenses used, and a review of potential optimization. The assessment is completed according to the guidelines from CIS, and their so-called CIS-Control methods. For more information visit: [www.cisesecurity.org/controls](http://www.cisesecurity.org/controls).

## Content

- A kickoff call, to clarify the timeline and requirements.
- A workshop to clarify the current situation, configuration, exceptions and other important aspects of security.
- The installation and running of automated scan (CSAT), endpoint, O365, AD, Azure AD, and Intune.
- A review of the difference between workshop acquired information and the scanning results.
- A call to clarify differences and gain further understanding.
- The building of an extensive report covering the overall situation.
- A summary within PowerPoint, to include extractions of possible recommended actions from the report.
- The creation of an IT cyber security roadmap.
- A presentation of results, with a Q&A session.

### Duration

**20-40**  
days

including scanning

### Cost

**7600**  
CHF

including briefing  
and planning time  
but excluding travel  
expenses

### Participants

The project driver,  
and representatives  
from various parts of  
the business that are  
involved in the  
back office
